STABILIZATION

of water-electrolyte
balance in pigs...

 **farm'apro**
NUTRITION

FEATURES and effects

Stabilization of water-electrolyte balance in pigs...

The preparation is used for stabilizing digestion processes that may become disturbed by diseases of the digestive system (e.g. diarrhea) and for stabilizing water-electrolyte balance (dehydration, loss of electrolytes with piglets and sows):

- levels energetic shortages,
- levels the amount of electrolytes lost as a result of diarrhea,
- stimulates water intake in high temperatures,
- regulates disturbances in acid-base balance,
- replenishes the need for essential vitamins and microelements,
- decreases reaction to stress in critical periods for animals.

Composition:

Dextrose (40%), sulfate of soda (23%), lactose (18%), monopotassium phosphate (9%), sodium bicarbonate (7%), vitamin E acetate, vitamin A, cooper chelat, manganese chelate, vitamin D₃, zinc chelate, iron chelate.

Analysis per kg:

Vitamin A	1 100 000 UI
Vitamin D ₃	160 000 UI
Vitamin E acetate.....	1 600 mg
Sodium.....	90 g
Potassium	24 g
Manganese	40,5 mg
Cooper	40 mg
Zinc	36 mg
Iron	33 mg

Precautions:

Product is destined only for animals. It is advised to contact the veterinary medicine before application or extension of application.

Stockage conditions:

Keep in 10 to 25° C place. Don't expose the unit directly to light.

DOSAGE and use

Suckling piglets

In case of digestive troubles, large litter, insufficiency lactation, period or in case of fostering.

Dissolve 5 to 10 g of Hydratonic into 1 litre of drinking water. Distribute 1 litre per litter, twice per day for 3-6 days.

Weaned piglets

Adaptation of piglets at the beginning of post-weaning period. In case of digestive troubles, large litter, strong heat period.

Distribute 2,5 to 5 g of Hydratonic per 1 litre of drinking water for 3-6 days.

Sows

Weakness as stress consequence during peripartum (heat strong period).

Distribute 3 to 5 g/sows/day with drinking water for 3-6 days.
